Projects

StudyNest – AI-Powered PDF Learning Assistant

- *Flask, SQLite, RAG, LLM APIs, Tailwind CSS, Python* | [GitHub](#) | [Live Demo](#)
- Built a full-stack app that converts uploaded PDFs into quizzes, flashcards, and smart notes using an LLM-integrated pipeline.
- Implemented a Retrieval-Augmented Generation (RAG) tutor that answers questions grounded strictly in the uploaded document to prevent hallucination.
- Designed 5 quiz types across 3 difficulty levels, plus a gamification system (XP, streaks, badges) and revision mode that targets previously weak topics.
- Built a PDF parsing pipeline with `pypdf` and integrated multi-provider LLM support (Anthropic, OpenAI, Gemini) via user-supplied API keys.

TrustSeal – NLP-Based Job Fraud Detection

- *Flask, scikit-learn, TF-IDF, Python* | [GitHub](#) | [Live Demo](#)
- Built an NLP classifier trained on the EMSCAD dataset (~18,000 labeled job postings) to flag listings as Genuine, Suspicious, or Fraudulent.
- Engineered a TF-IDF-based text vectorization pipeline feeding a probabilistic classifier, producing confidence-scored predictions via `predict_proba`.
- Designed a web interface with a real-time input-completion tracker and preloaded sample postings for instant model testing.

Leadership & Extracurricular Activities
